```

Declare three new variables for address/state/zipcode

```
string address;
cout << "Address:\t";
cin.ignore();
getline(cin, address);

string city;
cout << "City:    \t";
cin >> city;

string state_name;
cout << "state:    \t";
cin.ignore(); /* Flush the cin */
getline(cin, state_name, '\n');
/* get only the first two digits for the State name string */
state_name = state_name.substr(0, 2);

string zip_code;
cout << "zip_code \t";
cin >> zip_code;
```

read values for address/state/zipcode including 2 digits for state

```
string address;
cout << "Address:\t";
cin.ignore();
getline(cin, address);

string city;
cout << "City:    \t";
cin >> city;

string state_name;
cout << "state:    \t";
cin.ignore(); /* Flush the cin */
getline(cin, state_name, '\n');
/* get only the first two digits for the State name string */
state_name = state_name.substr(0, 2);
```

Shan Cao Practice 2

correctly print values for address/state/zipcode in requested format without error

```
shancao@shans-iMac prac_2 % ./practise2
Guest Book

First name:      Shan
Middle initial:  C
Last name:       CAO
Address:         21 Bixby lane
City:           Westford
state:          MA
zip_code        01886
Country:        USA
-----

Display what has been typed in

ENTRY

```

Shan Cao Praticice 2

create new string, printing it with

```
cout << "-----\n\n";
cout << "Display what it looks like if we put all the variables into the "
      << "same variables\n";
string longstr = first_name + " " + middle_initial + " " + last_name + '\n' +
                address + " \n" + city + " " + state_name + " " + zip_code +
                " \n" + country + "\n";

longstr = longstr + '\n';
cout << "\nENTRY\n"; // display the entry
cout << longstr;
```

Shan Cao Praticice 2

replacing \n with period and printing it

```
replace(longstr.begin(), longstr.end(), '\n', '.');
```

Shan Cao Praticice 2

Print ASCII sum for the final string.

```
int sum_of_ascII(string ss) {  
    int sum = 0;  
    for (int i = 0; i < ss.size(); i++) {  
        sum = sum + ss[i];  
    }  
    return sum;  
}
```

```
cout << "-----\n\n";  
cout << "The Sum of the ASC value of all the digits \n";  
int total = sum_of_ascII(longstr);  
cout << "the number is: \t";  
cout << total;
```
